

We must **act now** for **jobs • investment • clean energy**

Wind energy is creating jobs today in manufacturing, construction and operations, and is supporting rural economic development – while remaining an essential component for a Canadian strategy to fight climate change and ensure that 90% of Canada's electricity comes from non-emitting sources by 2020.

The Federal Government's successful ecoENERGY for Renewable Power program has now met its target and allocated all of its funding. Canada's rapidly expanding wind energy industry requires a renewed commitment to support renewable power deployment in the 2010 Federal Budget in order to successfully compete for investment and create new jobs.

Global leaders are pursuing clean renewable energy as a path to economic recovery and future growth. Without renewed federal support for renewable power, investors in wind energy manufacturing and project development will increasingly shift their investments away from Canada and to the United States.

The time to act is now!
